

Primer for Eco-Easy Panels

Shieldcoat's CT401 (water based primer) has proven to achieve excellent adhesion to the smooth side of the Eco-Easy panel. Testing was conducted in May 2016 at Shieldcoat's head office. Adhesion testing was conducted according to AS 1580.408.2004. See attached images showing test pass.

Provided the surface is free of contaminants, the CT401 can be applied directly to the Eco-Easy panel using either a paint brush, roller or airless spray gun at a rate of 8-10m² per Lt.

Dry times: Touch dry, 30 minutes. Redcoat time, 2 hours

Dry film thickness: 50-60 microns

Appearance: White viscous liquid – Dries milky white

Storage: Store in a dry, cool place

Pot life: 2 years or more provided lid is correctly sealed

Clean up: Water

Safety: Non-Hazardous material
